

SENROR

Good design has to affect both people's senses and awareness. Appeal to their feelings and minds. Express movement and stillness. The Senor visitor and conference chair has an elegant, minimalistic design with lines that emanate balance and harmony. While the unusual mix of materials gives the chair a vibrant and personal character: Almost undefinable. Easy to love.

The most formative and distinctive mark of the Senor range of chairs is the aluminium brace, appearing to split the backrest, and then merging harmoniously into the armrests. The upper backrest area can be configured to suit individual tastes; one possibility being a single exposed wood shell, or otherwise the upholstered or the mesh-covered back and front variants in two heights. With its multiplicity of configuration options, available variants: as a cantilever or as a conference swivel chair with a five-star base on glides, or optionally on castors Senor chairs can be integrated into various interiors as if from a single package.

VOLKER W. EYSING

Volker W. Eysing believes a product's function is closely linked with its form and in all his designs he strives for clarity and user-friendliness. With Senor, he has created a subtle form that breathes tranquillity and harmony, while the chair at the same time radiates activity with its pronounced personality and strong character.

"I strive for clarity and user-friendliness in all my designs."

Volker W. Eysing
